

AGAB receives an order from a company in the heat transfer field

AGAB Press Automation in Helsingborg has received an order for a stationary coil tilter.

– The coil tilter can turn coil up to 90° and can handle coil weights of up to 6000 kg. Using the motorized slewing ring the coil tilter can be horizontally rotated 180°, says Anders Glerup.

– The coil tilter stabilizes the coil's center of gravity when tilted, avoiding unwanted movements. Because the coil does not move, the operation is smooth and safe, which protects both the coil and the personnel, adds Anders Glerup, CEO of AGAB Pressautomation.
