

Increased capacity of world-leading heat exchange manufacturers!
AGAB has signed an order for another mobile battery-powered tool changer type WG Mobile M8C. In order to meet increased demand and thus an increased need for capacity in the heat exchange industry, AGAB has now been honored to deliver complete equipment with AGAB's automatic tool clamps, tool stand and the self-propelled tool changer type WG Mobile M8C. The total solution can handle tool weights up to 8 tons. Changing the heavy tools can then be done according to SMED, single minutes exchange of dies, comments Anders Glerup technical adviser at AGAB.
