

Increased capacity of expansive subcontractor for Automotive!

See also AGAB's other programs: www.agab.se

AGAB has signed an order for another mobile battery-powered die changer type WG Mobile M20. To meet increased demand and thus an increased need for capacity in automotive, AGAB has now had the opportunity of delivering another mobile battery-powered tool changer. With an ingenious laser system, it is easy to handle tools from different levels and with precise docking it makes it safe to change tools.

The mobile die changer can handle tool weights up to 20 tons. Previously, they had AGAB's WG Mobile M12 for 12 tonnes, but the tools are becoming increasingly complex with more stations and the weights will then also be heavier. Changing the heavy dies can be done according to SMED, single minutes exchange of dies, comments Anders Glerup technical adviser at AGAB.
