

New order, AGAB delivers hydraulic press for Swedish development company in carbon technology!

AGAB will supply a complete hydraulic press for new gluing technology for carbon production. The press is specially adapted for handling the new technology and due to its availability great advantages when loading new material. The press can be operated manually or via a robot with a simple interface in between. AGAB, which sells both new and used press lines, currently has presses with peripheral equipment in stock up to 6500 kN. All machines sold via AGAB can already be equipped with SMED from delivery, a system with AGAB quick clamping and AGAB mobile tool change system that reduces replacement times to less than 10 minutes.

Hydraulic press from AGAB with robot which also is for sale. See also AGAB's other programs with second-hand presses: www.agab.se
