

Experience gave new repeat order to AGAB!

New AGAB Tandem Design 2x55 ton, this time the adapter plates will be loaded with 2x55 ton heavy press tools. AGAB has developed an ingenious design with compact exact positioning- and automatic line up system.

This is most important with the line up to avoid problems with in- and offloading off heavy tools. AGAB Tandem Design is a track solution, and the T 110 carriage moves inline of the blanking line. The total transported weight is approx. 110 ton.

Most recently we made sophisticated solutions for 4 die carts with slew drive move on top. This project was for a brand-new forge factory in Germany.
